(a) Tilt vs flow alignment
Tilt of the wall layer (deg)
Flow-alignment parameter λ
Q-tensor model (no-slip flow)
MPCD passive swirl
2θ_L = arccos(1/λ)
(b) λ = 2: ejection at a threshold
Tilt coherence
Wall +1/2
Imposed flow strength U
(c) Flow variants at U = 1 (above threshold)
Tilt (deg)
67°
68°
96°
79°
79°
101°
λ = 2
λ = 4
Measured no-slip profile
Shear only in the wall band
No shear in the wall band (wall slips)
arccos(1/λ)
