(a) Crowded cores sit closer to the wall
Active
Passive
Core depth d below the wall (cells)
Wall-defect spacing (cells)
(b) One variable orders both sets
Tilt (deg)
Active: tilt = 24 + 59 d√s
Passive: tilt = 20 + 107 d√s
d√s (∝ depth / alignment length)
(c) The correction term can only be ≥ 0;
crowded layers sit below
Tilt − arccos(1/λ) (deg)
Active
Passive
d√s
